1. Claims 1-20 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

It is unclear from the specification what "a boost module" is and what does it include.

Therefore, the operation of figure 1 is not well understood.

Furthermore, it appears that the original specification does not have support for amended figure 1 in which the signals from the paraboost module (110), oscillator and the oscillating drive signal feeding to the analog multiplier (590).

- 2. The proposed drawing correction for figure 1 has not been approved since the amended tigure 1 does not have support in the original specification.
- 3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1,9 and 19 (insofar as understood) are rejected under 35 U.S.C. 102(b) as being anticipated by Hlady et al (Pat # 5,700,953).

As to claims 1,9 and 19, Hlady et al disclose method and apparatus for mapping mechanical property of a material using a scanning force microscope having an oscillating probe (16), a phase detection circuit/parachuting (22) coupled to the probe (16), a probe drive

boosting circuit/parachuting reduction circuitry (feed back loop) coupled to the phase circuit (22) for boosting a signal the probe based on the phase signal detected by the phase detection circuit (22).
